Safety Guidance - Accidental Ingestion
Advice for Affected Person

---

*SafetyGel products are not intended for ingestion. If accidental ingestion occurs, **please seek medical attention immediately**.*

*The following information is provided for safety purposes only, and is **not** a substitute for professional medical advice.*

If accidental ingestion occurs:

- Remove any visible product from the mouth
- Do not induce vomiting unless instructed by a medical professional
- **Seek medical advice,** particularly if the person feels unwell or experiences coughing, choking or discomfort
- When seeking medical attention, take the product packaging or container with you where possible

SafetyGel contains super absorbent polymer (SAP), which expands and forms a gel when it comes into contact with liquids.

This information is provided for product safety purposes only and is not intended to provide medical advice, diagnosis or treatment recommendations.

Safety Guidance - Accidental Ingestion

Advice for Medical Professionals

SafetyGel contains super absorbent polymer (SAP) designed to absorb and retain liquids. The product is supplied as a dry granular material and is not classified as hazardous under Regulation (EC) No. 1272/2008.

Following contact with liquids, the polymer expands and forms a gel.

Product packaging and the Safety Data Sheet should be reviewed where available.

Following ingestion:
Granules or gel may remain within the oral cavity, throat or airway.

When assessing a patient following ingestion, particular consideration should be given to the presence of granules or gel within the oral cavity, throat or airway.

Dry granules present within the mouth, throat or airway may absorb moisture and expand.

This information is provided to support product identification and clinical assessment and is not intended to provide treatment recommendations.
